Calculating Approximate Tire Widths – Millimeters to Inches

The following explains how to convert tire size listed in millimeters to inches in order to use the above weight table.

Example Tire Size: 225/45R17

The first three numbers (**225/45R17**) are the tire's indicated section width in millimeters, measured from sidewall to sidewall.

The section width in millimeters can be converted into inches in either of the two following ways:

1) By multiplying it by 0.04 - For example: 225mm X 0.04 = 9"

2) By dividing it by 25.4. For example: 225mm / 25.4 = 8.86"

Call Lincoln County Department of Public Works at (509) 725-7041 if you have any questions.
